

Artificial Intelligence Literacy Act of 2023

H.R.6791, 118th

INTRODUCED

Rep. Blunt Rochester (D-DE)
Workforce & access · U.S. House

HOW FAR IT WAS CARRIED

BACKGROUND

Rather than build a new programme, this bill folds AI literacy into the digital-literacy machinery that already exists. By naming AI literacy as a component of digital literacy under the Digital Equity Act, it makes AI education immediately eligible for established federal funding streams rather than waiting on a new authorisation.

KEY PROVISIONS

- Defines AI literacy in statute as a component of digital literacy.
- Makes AI literacy programmes eligible under existing Digital Equity Act funding.
- Covers both general public understanding and workforce-directed instruction.
- Reaches libraries, schools, and community organisations already delivering digital-skills work.
- Avoids standing up a parallel programme with its own authorisation.

LEGISLATIVE RECORD

Introduced 14 December 2023.
